DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to methods of screening for compounds which inhibit PTP1B, classified in class 435, subclass 21.
 - II. Claims 13-16, drawn to methods of screening for compounds which increase IRS-2 levels, classified in class 435, subclass 4.
 - III. Claims 17-20, drawn to drawn to methods of screening for compounds which downregulate genes in lipogenesis, classified in class 435, subclass 6.
 - IV. Claims 21-24, drawn to drawn to methods for screening for compounds which downregulate genes in gluconeogenesis, classified in class 435, subclass 6.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions in Groups I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are unrelated because each invention screens for a different event and yields a different result. For example, Group I results in a determination that PTP1B mRNA is either inhibited or not by a compound, while Group II results in determination of compounds involved in increased levels of IRS-2 in mammalian livers, Group III results in identification of the effect of

Art Unit: 1634

compounds on expression of lipogenesis related genes while Group IV results in identification of the effect of compounds on expression of gluconeogenesis related genes. These methods are entirely unrelated in function and effect since each will yield different results.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Further, even between Groups III and IV, which are commonly classified, because these inventions are distinct for the reasons given above, the search required for Group III is not required for Group IV, restriction for examination purposes as indicated is proper. In fact, a different search would be required for each Group, which would focus on different enzymatic pathways, different prior art and different entire subfields.

4. A telephone call was made to Daniel Collins on January 27, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
